

POWER BUS BOARD INSTALLATION (for the Desktop Version)

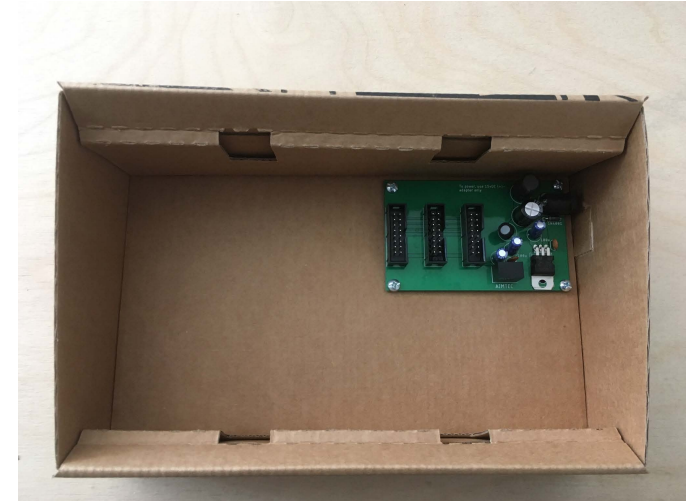

Now it's time to install the assembled power bus board into the carton case. Place the power supply pcb on the carton paper as shown. Do not place it to the edges of the carton, but some mm inside.

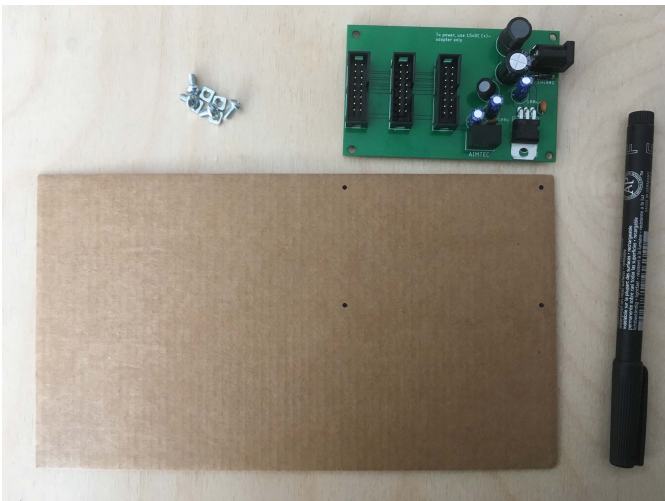

With the help of a screwdriver open these 4 holes, place the board on top and add the bolts.

Finally, place the power into the cardboard case, and you are ready to connect your lil'Erebus to it.

Mark the carton paper with a pen through the pcb's holes. Your marks should look like these.

Then, flip it on the other side and place the 4 square nuts.
