

## MovieStar 60

### Home Cinema – Wharfedale style

Our MovieStar sub/sat systems offer a no compromise solution for those who want a small, tidy, discrete loudspeaker system for their Home Cinema, but refuse to tolerate the inadequate sound traditionally proffered by such systems. MovieStar 60 is a chic, retro-styled system with unparalleled performance in its class. It's superb full-range performance remains as composed and confident with music as it is dynamic and exciting with movies, yet the compact dimensions mean they are easy to install without an overbearing influence on your room design.

## Immerse yourself in the experience...

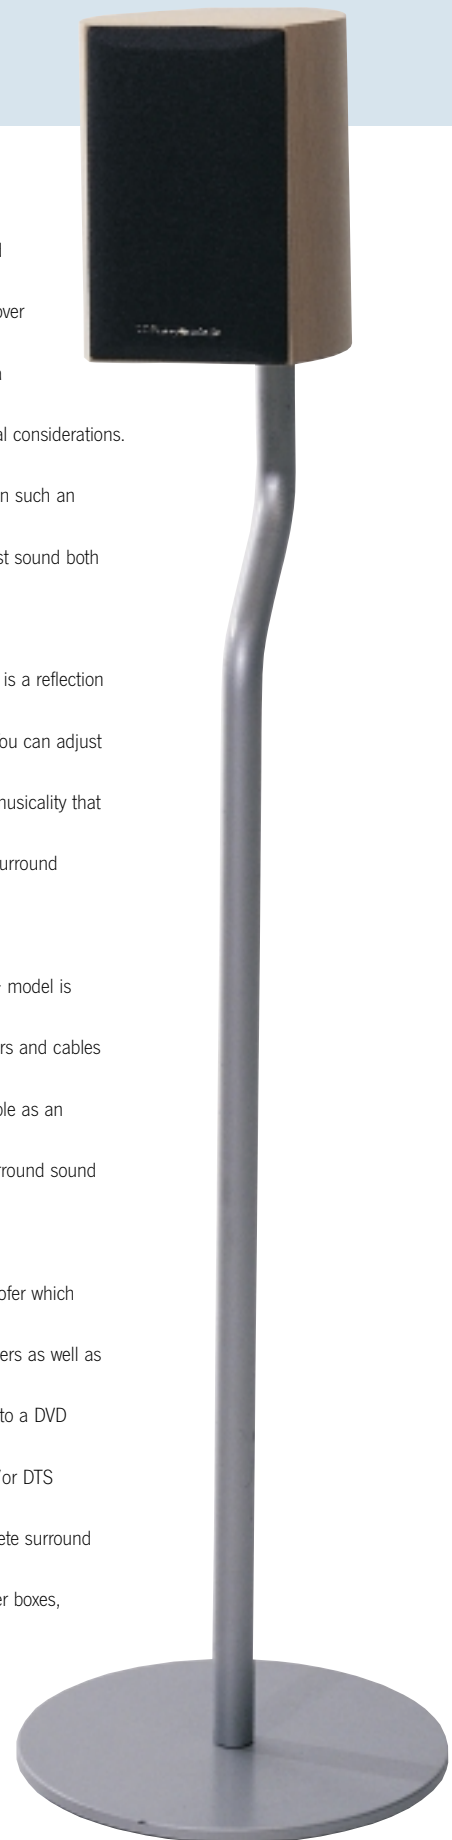

Moviestar 60 is one of the most entertaining surround sound systems available today. A good Home Cinema system must be versatile and engaging for both movies and music. It must cover a wide frequency range and be adaptable to a wide variety of rooms and systems and have a class that enables it to blend seamlessly into its surroundings, but these are just the practical considerations.

To be truly excellent, a surround sound system must draw you into the soundtrack or music in such an involving way that you can forget everything else and be swept along with the emotion. It must sound both natural and exciting.

The Moviestar 60 systems have these qualities in abundance, a clean, understated style that is a reflection of a more civilised age, a sound that is fully customisable through an adaptable subwoofer. You can adjust the crossover frequencies, volume and even the phase of the signal - but above all, it has a musicality that combines detail and precision with rhythm, to keep the adrenaline flowing and to make the surround sound experience totally addictive.

Supplied as a package, the Moviestar 60 is available in two forms. The 60+ model is supplied with an active subwoofer, five passive satellite speakers and cables and brackets for ceiling or wall mounting. Stands are available as an optional extra. This system is for those with an external surround sound processor.

The Moviestar 60-5.1 system features a different subwoofer which contains built-in amplification for all five satellite speakers as well as the subwoofer itself. This enables connection directly to a DVD player (which must have on-board Dolby Digital and/or DTS decoding and analogue outputs), to create a complete surround sound system in a box with the minimum fuss. Fewer boxes, fewer cables and more style.

Precision engineering of the very highest quality ensures that every Wharfedale speaker provides the crystal clear sound and detail needed to bring any music or soundtrack to life. The reduced resonance curved cabinets can be wall or ceiling mounted using our innovative bracket system for the ultimate stealth installation

## Features

- **Powered Subwoofer with 100w internal amplifier**
- **Automatic power-off after 15mins of inactivity**
- **Continuous crossover adjust for excellent system control**
- **Phase adjustment for optimum integration**
- **Tonally matched satellite speakers**
- **Outstanding build quality and finish**

### MovieStar 60 - 5.1

The MovieStar 60+ system is also available as a fully active system - no need for separate amplification. This is supplied with our 'MovieStar control system' subwoofer which includes built-in amplification for all speakers and a Dolby Pro-logic decoder. Simply plug your audio sources directly into the subwoofer for full-range, glorious surround sound.

Separate brochure available.
