

A Wharfedale Home Theatre surround sound system brings the full scale and atmosphere of the blockbuster movies into your own home. Choose

models from the Valdus loudspeaker range with the "5 Star" award winning Valdus Centre Channel speaker and the awesome Valdus Power-Sub sub-woofer to make a system that brings drama, excitement and the terror of the original movie film right into your home. Saturday nights will never be the same again!

VALDUS POWER SUB

VALDUS CENTRE

The Valdus Centre speaker has shielded magnets to allow it to sit on your television receiver and with three powerful drive units it projects the sound with a real punch. No longer will the spectacular, the explosive and the dangerous fall flat with the limp sound from your television. POWER on; LIGHTS down; TAPE running; and ACTION!

Buildings collapse; missiles launch; cars explode; and typhoons smash through the streets and the floor shakes with the heavy, realistically powerful bass that makes all this drama convincing. Designed to boost those deep low sounds the Valdus Power-Sub has two big woofers in an efficient acoustic band-pass enclosure; driven by a substantial 50 watt amplifier. With Valdus it pays to fasten your seat belts.

Maximum efficiency

The big sound from

Wharfedale

BRITAIN'S MOST FAMOUS I

With over 64 years experience in producing loudspeakers for recording, for rock concerts, for discos, for instruments ranging from the wickedest rock guitar to thunderous church organs; only Wharfedale has the ability to give your music the power, the realism, the drama that you really deserve.

VALDUS speakers are efficient so you get more sound out into the room for each watt of power delivered by the amplifier. VALDUS takes loudspeaker design into a new era; a new age; a new dimension. Connect-up; Power-up; Volume-up; and its a new Life and things are getting better.

VALDUS 400

500

Wharfedale has developed a completely new tweeter for the VALDUS speakers. Designed to push out the highs cleanly and at real levels the "0316T" has a super-large 28mm plastic dome coupled to a coil kept cool by a special "Ferrofluid" magnetic oil. The moulded horn shape boosts the sensitivity and directs the sound to where it is needed — at the listener; whilst the moulded grid protects the vibrating dome from "finger" damage.

Building upon their 64 years of experience in the design and manufacture of loudspeaker drive units Wharfedale have produced a new family of advanced drive units for the VALDUS range.

Built to be tough and to deliver the goods they all have high-temperature voice-coils and oversize magnets assemblies so that these "sound-motors" punch out the levels of bass you need and do it each day and every day. Wharfedale have manufactured woofers for rock-concerts PAs and for guitar amplifiers. With experience of 24 inch diameter 1200 watt rated drive-units no-one is better able than Wharfedale to produce loudspeakers that shake the foundations and survive !

PROTECTION

Tough though it is even the 0316 tweeter will blow if it is driven too hard for too long. And when you hear your music through VALDUS loudspeakers you will not be able to resist turning up the level another notch or two. No problem! Wharfedale's electronic overload protection is ready to snap in and save the day when you go too far. When you've over-cooked things it disconnects the tweeter from the signal and then switches back on again a second or two later.
