

Setting Up Stealth Control as a Control Surface in Traktor PRO

Owners of the full version of Native Instruments' Traktor PRO can use the enclosed **Numark - Stealth Control Pro.tsi** file to add full Stealth Control compatibility to Traktor PRO. This file, and the instructions below are only needed for the full version of Traktor. The LE version of Traktor which is included with the Stealth Control has the necessary MIDI mapping built right into the program.

1. Launch Traktor.
2. Open the Traktor Preferences window.
3. In the Preferences window, click the **+** next to **Hotkey & MIDI Setup**.
4. Under **Hotkey MIDI Setup**, select **MIDI Setup**.
5. In the right-hand pane of the window, click the **Load** button.
6. In the window that opens, navigate to the **Numark - Stealth Control Pro.tsi** located in the same folder as this guide.
7. Double-click **Numark - Stealth Control Pro.tsi** file.
The window should close.
8. In the Preferences window, under **Hotkey & MIDI Setup**, select **MIDI Interfaces**.
9. In the right-hand pane, select **Numark Stealth Control**.
10. Click **OK**.

Traktor is now set up to use the Stealth Control as its control surface.
